SKIP LIGHTS

In accordance with Section 139 of the Highways Act 1980 and Section 65 of the Road Traffic Regulations Act 1984, it is a legal requirement that skips placed on a public highway must be lit at night.

At present, the current types of skip light that are available are few in number, crude in design and costly. We are able to offer a skip light which solves all of these problems that incorporates the following features:

- Highly visible 4-way LED design (exceeding that stipulated in paragraph 40 of the Traffic Signs Regulations and General Directions 1981 and Statutory Instrument 1981 No. 859)
- Daylight sensor with automatic switch on at dusk
- Rechargeable, eliminating the need for frequent and costly replacement batteries
- Battery power indicator that shows when the skip light is fully charged
- Slimline design for easy storage
- Lockable, tamperproof and waterproof
- Highly robust with no external switches and a heavy duty recharging socket
- Simple and comprehensive user instructions
- Tamperproof personalisation, incorporating your company name for identity purposes

CHARGING INSTRUCTIONS

Important Note

Please start charging your skip lights as soon as possible – the batteries inside the skip lights do not need to be discharged prior to charging them and if left flat for more than 48 hours will be damaged.

Questions and Answers

- 1. How long will the skip light take to charge from flat?**
 - 28 hours.

- 2. How do I know the skip light is charging?**
 - The skip light will glow alternately at each end.

- 3. How do I know when the skip light is fully charged?**
 - The skip light will glow at just one end.

- 4. Do I need to unplug the skip light when it is fully charged?**
 - No. It's always better to keep skip lights on charge when not in use.

- 5. How will I know how many days of use are available/remain for each skip light?**
 - Hold the skip light chain side up, then rotate it 180° so the chain is at the bottom. The skip light will flash quickly a number of times – first at one end, then the other. The total number of flashes equates to how many days use are available/remain for each skip light.

- 6. How do I switch the skip light off?**
 - Turn the skip light upside down so the chain is at the bottom.
